

The new Gen2 Smart Tachos have now been released (as of 15<sup>th</sup> June 2019), there are a few things that need to be noted:

- Driver Cards will be replaced as they come up for renewal so will not contain the new data until they comply with 'Annex 1C'. It will be legal to use an older card with a new Smart Tachograph and vice versa.
- If you have a vehicle fitted with a Smart Tachograph or your drivers have a new Driver Card then the firmware of your download equipment will need to be updated in order to process the new data. If your equipment cannot be updated then you will need to replace it.

If your equipment cannot be updated then in order for you to download the new generation tachograph data you will need to purchase the latest version of your download tool. However your old equipment can obviously still be used to download data from vehicles fitted with the pre-gen2 tachographs.

See below for various options:

HID (Omnikey 3121) Desktop Card Reader is still compatible with no update needed.

Digidown STD available for a free upgrade, serial numbers 48437 onwards. Upgrade can be done via customer (IT/Admin level) or by TMS – just pay return postage.
